Constructivist movement

Art Nouveau

The genesis of 20th century graphic design

Art Nouveau
Subject
Introduction :

Art Nouveau styled woman with long detailed flowing hair art design.

Time: emerged in Europe in the late 19th century and early 20th century.
Scope: The movement swept through most of Europe, affecting the United Kingdom and the United States.
Fields: Architecture, furniture, jewelry, clothing, and other product design, graphic design, book illustration, and even sculpture and painting art are influenced by it.
Essence: It is the continuation and spread of the British "arts and crafts" movement on the European continent. It advocates that artists engage in product design to realize the unity of technology and art.

Art Nouveau originated in England by William Brown. Morris's Floral Design is an arts and crafts movement founded by Morris students.

Early prototypes of the style included the Red House of Morris (1859) and James Abbott McNeill Whistler's lavish Peacock Room.

This new movement was also strongly influenced by Pre-Raphaelite painters such as Dante Gabriel Rossetti and Edward Burne-Jones, and especially by the British graphic artists of the eighties of the 19th century, such as Selwyn Image, Heywood Sumner, Walter Crane, Alfred Gilbert and Aubrey Beardsley.

Representative artist

The straight line belongs to man, the curve belongs to God - Antonio Gaudi.

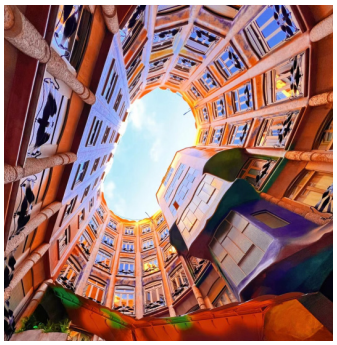

Antonio Gaudi was born on June 25, 1852, in the small Catalan town of Reus, not far from Barcelona. As a young man, he wrote in his diary: "Only a madman would attempt to describe what does not exist in the world!" His whole being was filled with love for nature.

Gaudi believes that architecture is sculpture, symphony, painting and poetry... It has to be very artistic. Whether it is modernism, naturalism or Eastern Islamic styles, they all merge in his mind and appear in his architecture.

At the time when straight lines and parallel elements were prevalent, Gaudi believed that straight lines were created by man rather than nature.Antonio Gaudi is God's gift to the world. He used the world to decorate the architecture, the curves and structure to the extreme, to create a unique masterpiece.

In 1877, Gaudí designed an auditorium for a university, which was also his graduation project. After the plan came out, it caused a lot of controversy, but it was finally passed. The principal of the architecture school lamented: "I don't know if I gave my diploma to a genius or a madman!"

The façade of Casa Batlló is entirely decorated with blue and green ceramics, a strange combination of colors that from a distance resembles the palette of Impressionist painters, but with a harmonious color palette that Salvador Dalí once likened to "a tranquil lake".

Casa Batlló

Casa Mira

The interior of La Pedrera is lit on both sides, with light coming in from the atrium and the street outside, and the shape of the rooms is almost all round, with ceilings, windows, corridors, and few square rectangles. La Pedrera has some religious overtones.

Four Seasons: Spring, Summer, Autumn and Winter

Gismonda by Mucha

After his processing, all the female figures appear sweet and elegant, with delicate and curvy figures, full of youthful vitality, and sometimes flowing and feminine hair. His paintings often consist of youthful and beautiful women and ornamental, curvaceous flowers and plants.This is the size of two printed stone slabs butt to each other at that time, which is undoubtedly an unconventional design. The background of the picture is simple and has a lot of white space, and only the mosaic decoration is painted above the head of "Gismonda".

Representative artist

Alphonse Maria Mucha

From the brilliant standard-bearer of the New Art movement to the great painterMucha's work draws on the elegant depictions of shapes and contours of Japanese woodcuts, the rich colors and geometric decorative effects of Byzantine art,He used sentimental decorative lines, simple contours and bright watercolor effects to create figures known as "Mucha style". His pictures often consisted of young and beautiful women and decorative flowers with smooth curves.
Mucha is very good at extracting his own painting elements from the classics, and he is willing to show the optimistic color of the picture, depicting the scene of prosperity. This was very popular with people, and he created posters and advertising posters everywhere.

Constructivist art

Artistic background :

Russian constructivism has greatly promoted the art and design of the world. Constructivism is a seminal movement in the fields of art, design and architecture that began in Russia in 1913 but really rose after the Russian Revolution of 1917. The revolution was an era of dissent and change that led to the dissolution of the Tsarist regime in favor of the Bolsheviks.They believe that art has no place in the enclosed space of an artist's studio. Rather, it should reflect the modern industrial world; Formulated in laboratories and factories; and was deployed as an active promoter of the broader communist revolution.

The Encyclopedia of Fine Arts

Rodtschenko Eine neue Zeit

Representative artist

Alexander Rodchenko is a Russian designer, photographer, painter and sculptor who is considered one of the founders of the constructivist movement in Russia. In fact, the term "constructivism" was first coined by the artist Kazimir Malevich based on the work of Rodchenko. Although Rodchenko's initial focus was painting, he later continued to play with photography, typography, and images, combining them into what came to be known as montage or photographic montage. He eschewed easel painting in favor of what he called "industrial art," that is, art with a social purpose and a mass message.

Alexander Rodchenko
1891-1956

Although many of his early works were created for political purposes, he continued to apply the art movement to advertisements for common items such as beer, pacifiers, cookies, watches, and other consumer goods.In these works, Rodchenko emphasizes the material qualities of painting, applying three primary colors in a way that draws attention to their substance as matter. "I reduced the painting to a logical conclusion and exhibited three canvases: red, blue, yellow," he declared. I say with certainty: it's all over. Basic color. Each plane is an airplane, and there are no more representatives.

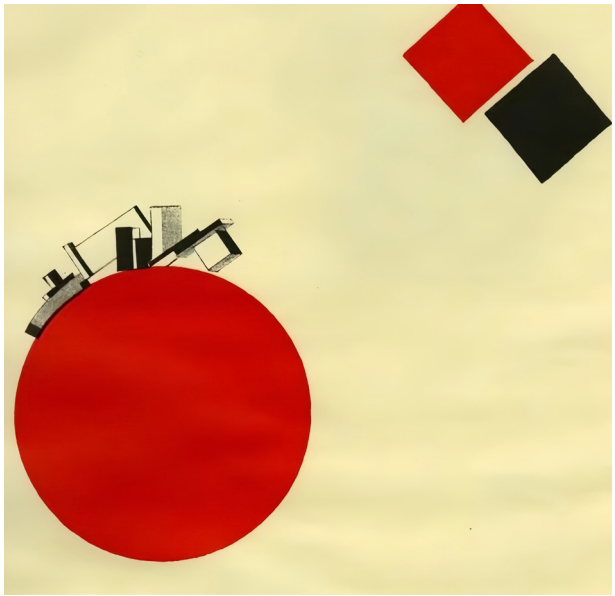

Representative artist

El Lissitzky developed his own absolutist style with a series of abstract geometric paintings he called Proun. Proun is essentially Lissitzky's exploration of the visual language of absolutism using spatial elements, using staggered axes and multiple perspectives. Later, Lissitzky vaguely defined them as "the basis for a shift from painting to architecture." Perhaps Malevich's supremacism focused solely on aesthetics, but this new aesthetic and philosophy suited the young country that had just experienced the triumph of its revolution. This new art of breaking with the past was used to break away from old regimes and social formations. The new country, battered by civil war, faced not only an international blockade and military intervention, but also a severe internal economic crisis and urban shrinkage. Eighty percent of the Soviet population was farmers and small traders, yet constructivism was obsessed with industrialization and the large urban landscape of industrialization. Even in supremacist abstract art, we can find in those standard geometric forms a collective "fantasy" of industrialization and efficiency.

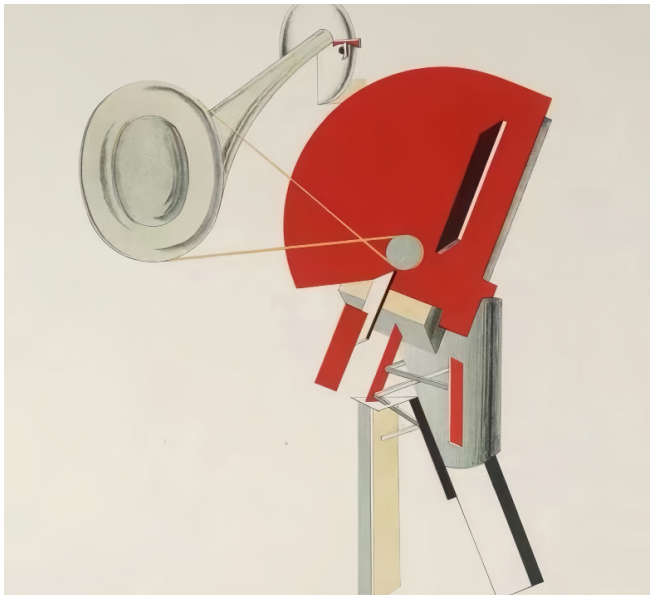

He was a Russian avant-garde artist and polymath who made a lasting impression on the world of art and design. He was very influential in the development of the Bauhaus and Constructivist art movements. His revolutionary and radical conception of visual concepts is considered a breakthrough and helped shape graphic design as we know it today.

El Lissitzky
1890-1941

Fly to the earth from a distance

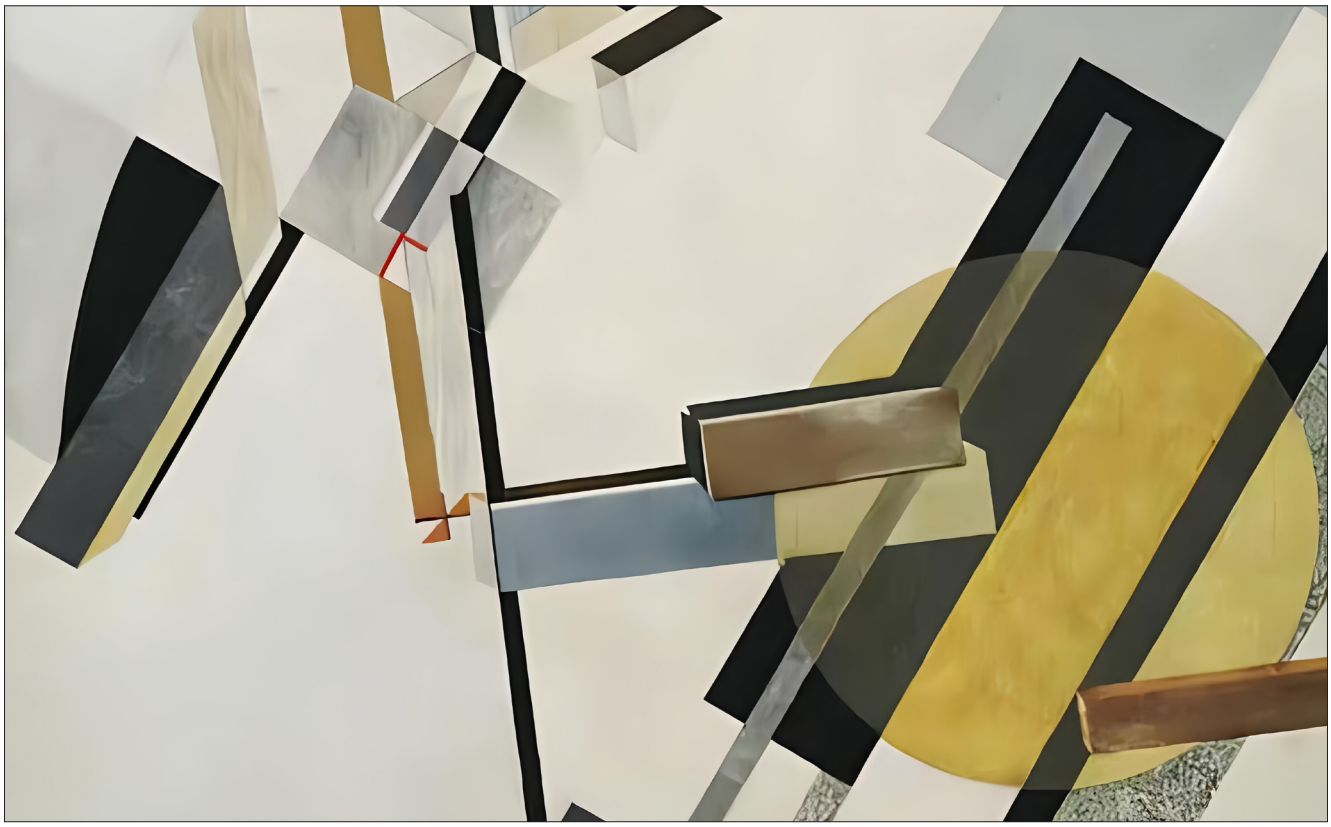

El Lissitzky Speaker

Artistic characteristics

It can integrate art into a new society. In terms of style, this new language emphasizes dynamics, it is gravity-defying, bold, rigid, and seems to be out of touch with the soft curvilinear forms of nature. In terms of function, they use abstract paintings in more practical and everyday household items and architectural designs. Their designs range from stationery, cloth, and household items to urban buildings and public monuments.

Many typical constructivism works are complex combinations of simple primitive geometric forms. They are more abstract than their predecessors and more difficult to interpret directly. The colors of red and black, the shapes of circles and triangles, and the materials of steel and glass are the signature elements of these works. Even if the political context and political intentions are completely removed, these highly identifiable compositions are enough to bring strong visual stimulation.

Proun 19D

Artistic background

Art Deco

The Art Deco movement originated in France in the 1920s and 1930s

Was represented by France, Britain and the United States Unique design movement

Art Deco, also known as Style Modern or 1925 Style, was a twentieth century movement in the decorative arts that grew to influence architecture, design, fashion and the visual arts.

Art Deco does not reject the technological beauty of the machine age, and mechanical, geometric, and purely decorative lines are also used to express the beauty of the era.

The commonality between them is strong color, luxurious texture, and distinctive personality. Commonly used lines or patterns are: sun ray radiation type, lightning type, zigzag type, overlapping arrow type, star flashing type, Egyptian pyramid type and so on.Art Deco style, love bright and strong color matching, with rich color, often with metal materials want to match.

Art Deco uses sharp, aero-dynamic shapes, Egyptian forms and colors, dance zigzags,motion lines and, in more modern time. Unlike the Early Modern style, Art Deco highlyexercises its use of illustrations and graphic representations of everyday objects. But these features do not do justice to the spirit of the Art Deco style which was bold, positive, industrial and often futuristic and one which emerged from a world rising from the ashes of ww1.

Representative designer

Romain de Tirtoffw

Romain de Tirtoff (1892-1990) was a French artist and designer known by the pseudonym Erté. He was a diversely talented 20th-century artist and designer who flourished in an array of fields, including fashion, jewellery, graphic arts, costume and set film, theatre, and opera, and interior decor.

Between 1915-1937, Erté designed over 200 covers for Harper's Bazaar, and his illustrations would also appear in such publications as Illustrated London News, Cosmopolitan, Ladies' Home Journal,and Vogue.

Romain de Tirtoff

Symphony Noir

Artistic characteristics

- Bold geometric shapes.
- Use of motion lines and sunbursts.
- Symbols of speed, power and flight: new developments in transportation.
- Geometry: A symbol of the mechanical and technological solutions to our problems.
- The new woman's form: reveals that women have won the right to freedom in society.
- Unconventional forms: based on jazz, short skirts and short hair, shocking dance and so on.
- orms of ancient culture: The imagination of ancient civilizations such as Egypt and Central America.

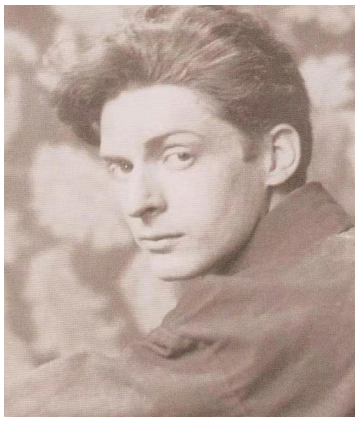

E. McKnight Kauffer

Edward McKnight Kauffer(1891-1968) an American designer who lived for much of his professional life in London, made a major contribution to British graphic design in the interwar years. He was a highly gifted artist who applied his understanding of modern styles of painting, particularly those associated with Paris, in a range of striking designs for important clients.

E. McKnight Kauffer picture

BAUHAUS

Artistic characteristics

Bauhaus design concept is that form follows function, less is more, removing some unnecessary decoration is also the essence of Bauhaus design style characteristics, Bauhaus design while maintaining functionality reflects the appearance of futurism. Bauhaus advocated function-based, non-fancy, simple and elegant geometric shapes, rationalization and simple design, and it favored practicality rather than showing them off.

In design, Bauhaus placed more emphasis on product practicality than pure beauty. However, this is not to say that the Bauhaus is not visually attractive, minimalist aesthetic characteristics are its biggest Peugeot, so that some classic designs handed down to the present, still do not feel outdated.

Artistic background

The Bauhaus is named after the German school, meaning "house of architecture", and in April 1919, the two schools of the Weimar Academy of Fine Arts and the School of Arts and Crafts merged to form the National Bauhaus School. From the beginning, Bauhaus was not just an architectural style, but a school of craftsmanship and fine art, influenced by Dutch style, Russian Constructivism and German modern design, and eventually became the most influential modernist art school of the 20th century. Defined as a utopian craft guild that integrates industrial design, architecture, sculpture and painting, the school offers artists and designers an original and influential curriculum made up of practical skills, craft, technology and theoretical knowledge.

Paul Klee

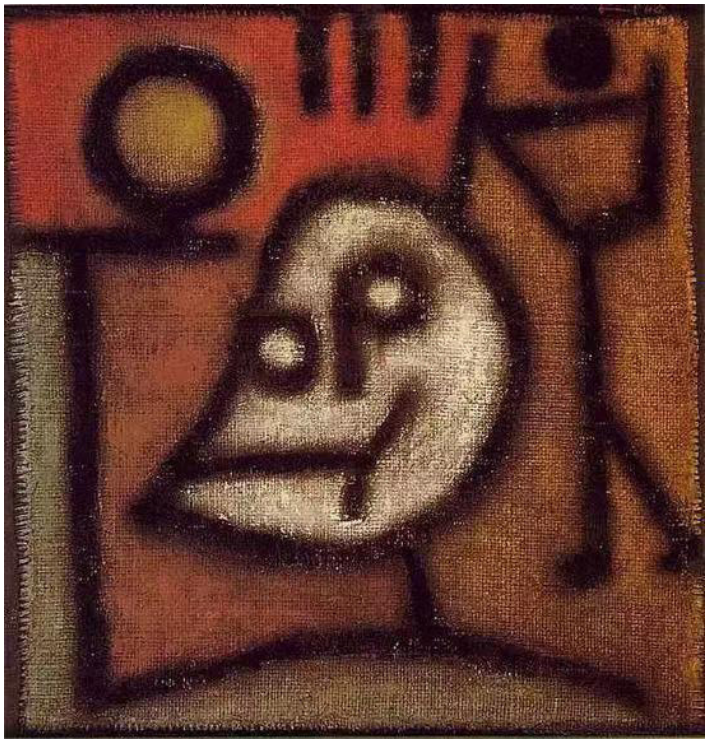

Representative artist

Paul Klee, born in Switzerland, graduated from the Academy of Fine Arts in Munich, one of the "Four Young Knights". Paul Klee loved literature and art as a child, wrote novels and poems in high school, and was an amateur violinist. In the early 20th century, Paul Klee traveled extensively to Italy to study Renaissance art, so he knew a lot about classical art. He created a unique way of expression in terms of color, form and space. His painting language is based on abstract points, lines and surfaces, and highlights the flow of music with clever lines and bright colors. Paul Klee as "The New Angel," "Death and Fire," "The Spirit for an Windows."

Vasily Kandinsky,a Russian-born French painter,

is one of the great figures of modern art and the founder of modern abstract art in theory and practice. Vasily Kondings studied law in his early years and loved painting, until he saw Monet's Haystack and decided to give up his promising legal career and concentrate on painting. He first learned from famous painters, and then gradually influenced by the new art atmosphere, began his own theoretical exploration and practice. Among them, "White Line Composition" is the peak of Kandinsky's artistic creativity in 1913, which is not only an absolutely abstract representative work, but also a unique and special composition.

MID CENTURY MODERN
1939-1960

Artistic background

The years around and following the second world war Salvador Dali,The Eephants1948saw graphic design in the modern style gain Jacson P widespread acceptance and application.

A booming post-World War ll American economy established a greater need for graphic design, mainly advertising and paclaging. The emigration of the German Bauhaus school of design to Chicago in 1937 brought a"mass-produced" minimalism to America; sparking a wild fire of "modern" architecture and design.

More recently the term "late modernism" has been redefined by at least one critic and used to refer to works written after 1945, rather than 1930.

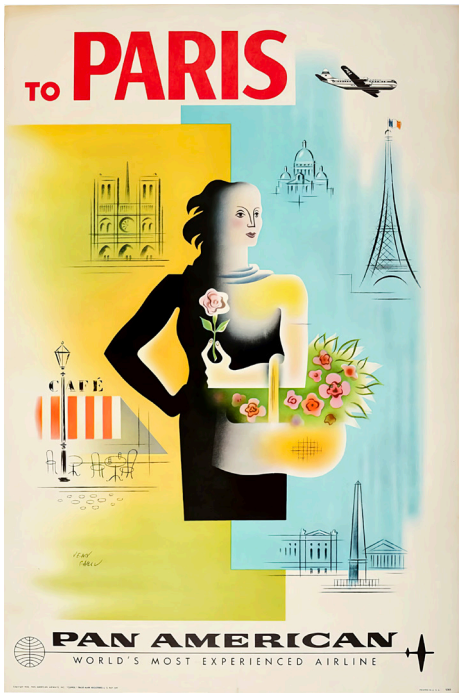

Late modernism encompasses the overal production of most recent art made theaftermath of World War ll. Known for, distorted geometric shapes, and informallayouts. The only aspect of this style that isn't informal is the type, which wasdevoid of decoration.

With this usage goes the idea that the ideolagy of modernism was significantly re-shaped by the events of World War ll, especially the Holocaust and the dropping of the atom bomb.
The 1940s in New York City heralded the triumph of American abstract expressionism and early modernism via great teachersin America like Hans Hofmann.

During the late 1940s Jackson Pollock's radical approach to painting revolutionized the potential for all contemporary art that followed him.

The style of design that originated in Switzerland in the 1940s was the basis of much of the development ographic design during the mid to late 20th century. Of the many contributions todevelop from the two schools were the use of, sans-serif typography, grids andasvmmetricallavouts.

Original Vintage Poster,1958

Original Vintage Poster, 1930s

Jean Carlu,1900-1997

Clipper original vintage poster, 1954

Vintage travel poster Air France France 1958

Was a French graphic designer, specialised in posters. He was member of a family of architects; his brother JacquesCarlu for example designed the Palais de Chaillot in Paris. He made posters during World War ll to promote an increase in American production. He was one of the first who realized that to fix a trademark in the minds of consumers a process needs to be gone through in which schematic forms and expressive colours are applied. These are the characteristics that give his posters and other works their distinguishable quality.The design is characterized by its bold shapes, bright colors, and simplified forms. He is a master at using typography to convey information, often using large block letters to grab the attention of his audience. He is also known for his use of negative space, bold, eye-catching designs helped sell everything from cigarettes to cars, and his influence is still visible in advertising campaigns today. His work continues to inspire designers around the world.

Representative designer

Mademoiselle

We can see how typography intersperses and interacts with closely related images. It is worth emphasizing that it combines different typographic series and variables that produce a specific climate when making typography choices based on the layout and accompanying images.

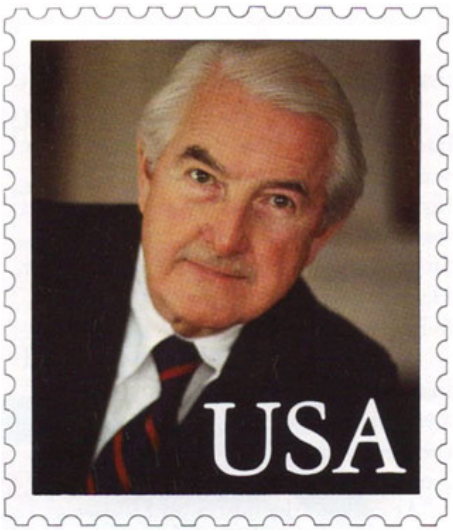

Bradbury Thompson

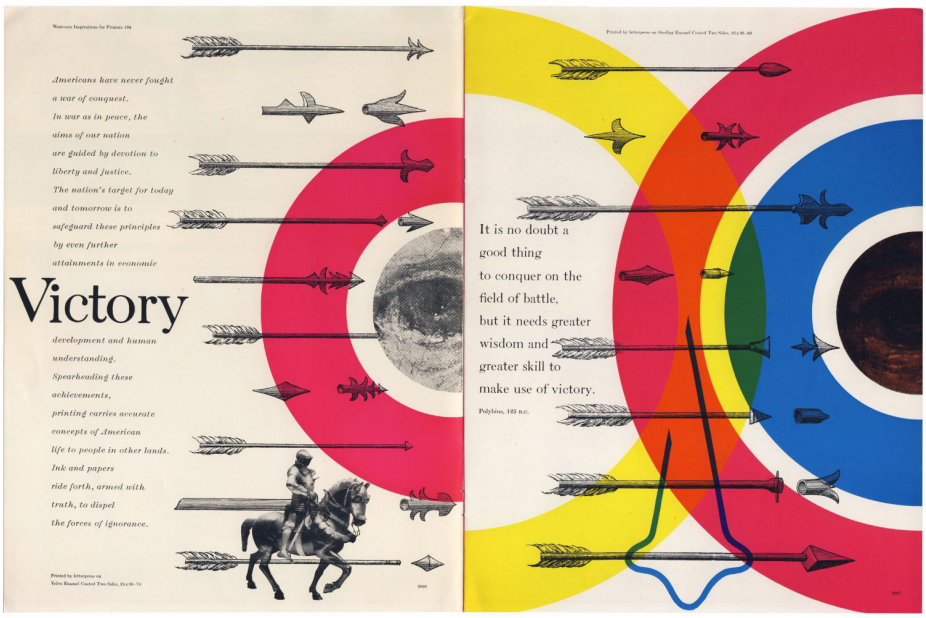

an American graphic designer and art director. One of the few art directors who have received al three major design awards:National Society of Art DlrectorsArt Director of the Year in1950; AIGA Gold Medal in 1975; and the Art Directors Hall of Fame award in 1977.began his experlments in typographic reform by creating his “monoalphabet," which broke with the tradition of separate letterforms for capital and lawer-case letters.

The emergence of the New York graphic design school marks the real formation of a systematic and independent design style of American graphic design.

He first introduced this typographic innovation in an issue of Westvaco Inspirations for Printers, one of four issues that he produced in 1945.Any analysis of Thompson's styie and any attempt to assess the value and extent of his influence leads irrevocably to one word form.

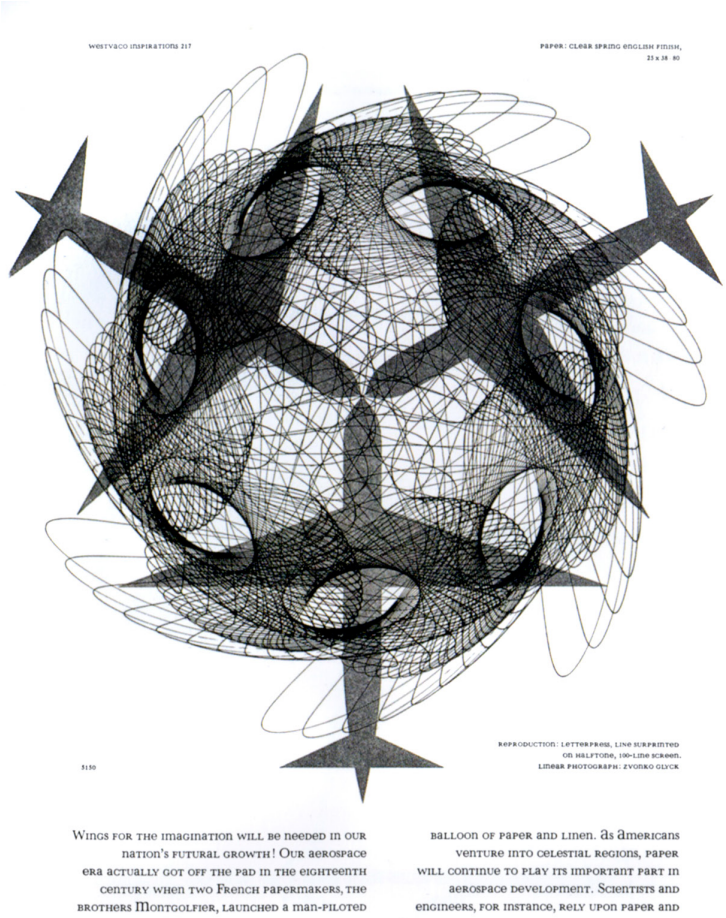

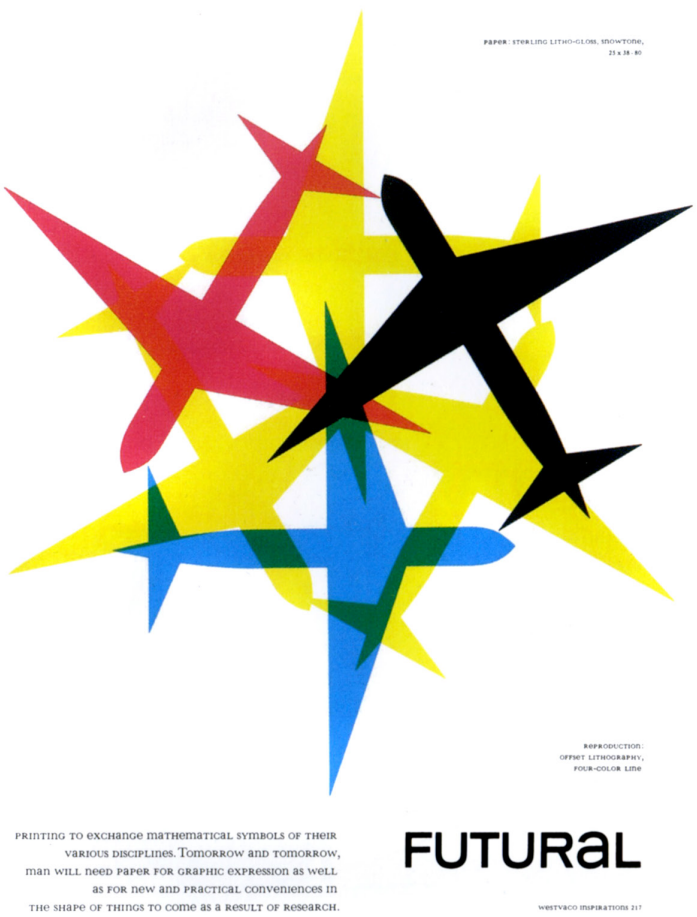

(1) Late modernism encompasses the overall production of most recent art made the aftermathof World War 11.Known for, distorted geometric shapes, and informal layouts. The only aspect of this style that isn't informal is the type, which was devoid of decoration.
To Recap, the main characteristics of the Late Modemn graphic design style are-
distorted geometric shapes
informal structural layout
plain, simple, non decorative type

(2) Swiss or International Typographic Style or the InternationalStyle, the style of design that originated in Switzerland in the 1940s was the basis of much of the development of graphic design during the mid to late 20th century. Of the many contributions to develop from the two schools were the use of, sans typography, grids and asymmetrical layouts

Be your own Muse

Poster works of the 1970s

Artistic background

Before the 1970s, a new aesthetic began to emerge as most of the world's mainstream films emerged with radiant designs that showed darkness, graininess, desolation, and despair. For years, low-budget films or productions outside the mainstream have carried a sense of menace. But now, even those in charge of the investments are coming to terms with the fact that sunshine and joy in the movies don't sell.
Nowhere is this more evident than in Hollywood. The rise of European art house cinema and its influence on a new generation of filmmakers led to the need to create new images for different types of films, even those that best represented those in power.

By the late 1970s, Hollywood had established a cinematic style that enabled it to dominate the global box office. Posters of these films helped define American cinema in this era.

Representative artist

Andy Warhol is regarded as one of the most famous figures in the art world of the 20th century, the advocate and leader of pop art, and the artist who had the greatest influence on Pop art. He boldly experimented with letterpress printing, rubber or wood rubbing, gold leaf technology, photo projection and other reproduction techniques.
In addition to being the leader of pop art, Warhol was also a film producer, writer, rock music composer, publisher, and a star artist in New York society and the art world.

Representative artist

Cielewicz

This can be seen in the works of Roman Cielewicz, a representative of the Polish poster School. For example, he created a poster for Hitchcock's classic work "Vertigo", a colorful ring of skulls, fingerprints, and jenga sets, using the method of element collage, that is, concisely "extracting the central idea" for the film.From the notes, we can see that he is an artist who thinks and collects inspiration all the time. Cieslewicz is also a "all-rounder" designer. His graphic design works include advertisements, lettering, collage, art direction, fonts, posters, books, photo synthesis and so on.

The Digital Revolution - 21st Century

Artistic background:

In the 21st century, the emergence of digital media has prompted a qualitative change in the social environment. Emerging technologies such as network technology, digital art and design, digital film and television, multimedia advertising and short films are constantly challenging the forms of contemporary art and design, but also enriching the extension of contemporary art and design. Entering the 21st century, the development of new science and technology; It leads to different psychological state, value orientation, aesthetic consciousness and time and space concept. In today's great changes in science and technology and people's ideological life, the connotation and extension of visual communication design have undergone qualitative changes, and diversification and integration have become the characteristics of today's visual communication design.

Representative artist

1948 Born in New York， Studied at the Kansas Institute of the Arts and the Comprehensive Art Business School in Basel, Switzerland.

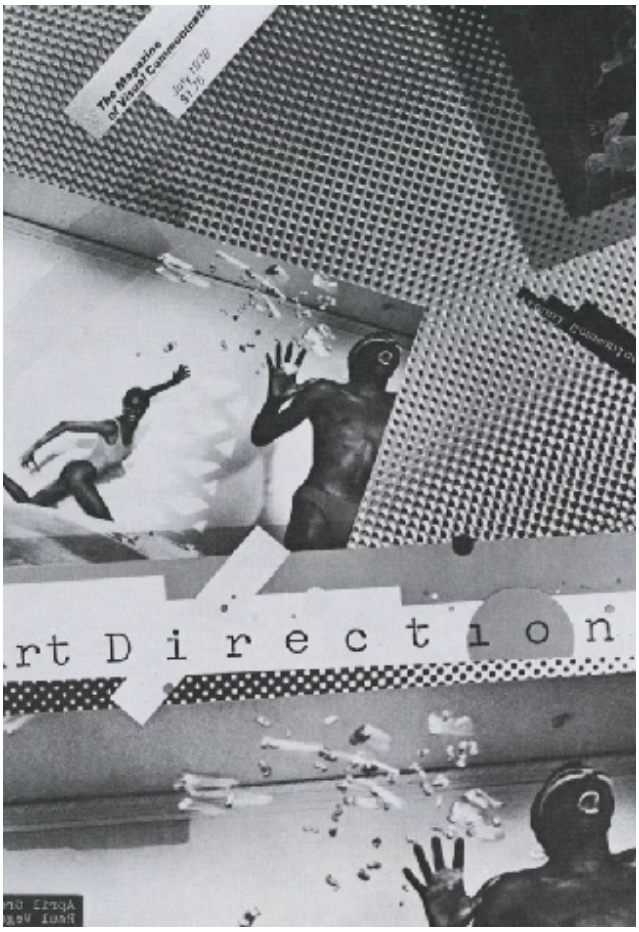

Greiman pioneered computer technology as a design tool.
Greiman has led the "New Wave" design movement in the United States.

April Greiman uses different words to describe her work: "hybrid image", "transmedia", "visual communication", but she never calls it "graphic design". She feels that graphic design is inextricably linked to print, but her work mixes elements from different mediums. Greiman believes that her design is more about space than pages, which may be why she thrives in the digital world.
The novel technology has opened up more possibilities for Greiman to blend prints, videos, and fonts into multiple layers that were not possible before.

Artistic background

Postmodernism

The term "postmodernism”first entered the philosophical lexicon in 1979, with the publication of The Postmodern Condition by Jean-Francois Lyotard. Therefore, postmodernity is a term used by philosophers, social scientists, art critics etc to refer to some aspects of contemporary art, culture, economics and social conditions that are the result of the unique features of late 20th century and early 21st century life.These features include globalization,consumerism and the fragmentation of authority.
"Post-modernity" is also used to demark a period in art, design and architecture beginning in the 1950's. Its an artistic period characterized by the abandonment of strong divisions of genre, and the emergence of the globalvillage. Postmodernity is said to be marked by the re-emergence of surface ornament.The postmodernism of print.

advertising design, which began in the United States, an improvement on modernist print advertising design, which used decorative techniques to enrich the visual effect of the layout until now this style is still affecting the current print advertising design.

Throughout the history of various styles of graphic advertising design and evolution of the development played an important role, and even a variety of styles coexist“Comprehensive style” of graphic advertising design works no matter how ever-changing the style the evolution of print advertising design is always inseparable from the progress of Science and technology.

Neville Brody (1957-)

Neville Brody (1957 -) is an alumnus of the London College of Communication and is known for his work on The Face magazine (1981-1986) and Arena magazine (1987-1990), as well as for designing record covers for artists such as Cabaret Voltaire and Nine Inch Nails. He was one of the founding members of FontFont (now FontShop) in London and designed a number of notable typefaces for them. He was also partly responsible for instigating the project an influential fusion between a magazine, graphics design and typeface design. Each pack includes. Apublication with articles relating to typography and surrounding.

Representative designer

Neville Brody/David Carson

William Longhouse, 1983, poster for the Graves Architecture Exhibition

subjects four brand new fonts that are unique and revolutionary in some shape or form and four posters designed by the type designer usually using little more than their included font. aInitially working in record cover design, Brody made his name largely through his revolutionary work as Art Director for the Face magazine.Brody has consistently pushed the boundaries of visual communication in all media through his experimental and challenging work, and continues to extend the visual languages we use through his exploratory creative expression.

David Carson (1956 -) is best known for his innovative magazine design, and use of experimental typography. His first actual contact with graphic design was made in 1980 at the University of Arizona on a two week graphics course. During the period of 1982-1987, Carson worked as a teacher in Torrey Pines High School in San Diego, California. By the late eighties he had developed his signature style, using "dirty" type and non-mainstream photography. He would later be dubbed the "father of grunge". Later in his computer work, both in terms of image processing as well as typography interferences, that could be done via software such as Adobe Photoshop and the Macromedia packages was crucial. Carson went further than any of his generation in exploiting these to create his unique "grungy" style. His work is highly personal, but also commercially successful, and his clients range from pop music, fashion, high-tech, and government agencies, from Giorgio Armani to Microsoft, Lucent, Sony, and even the Atlanta Olympics."I never knew what the rules were, so everything came naturally, not deliberately", and there are few designers in the world who can play with design so thoroughly and have as much fun as him. If you look back at David Carson's upbringing, we will find that he gave up a stable job as a PhD in sociology to break into the field of design, from the world's top surfer to "the world's most influential graphic designer", and you will find that he has always had a bold drive and a pioneering spirit of adventure. There is no end to the design work, and there will always be new languages. As he says, he has put his inexhaustible creative passion into his work, and his influence has been fermented around the world.

David Carson's magazine poster

Computer technologies enabled him to break every known graphic design rule, including negative leading, overlapping, layering, and creating absurd compositional layouts, such as backwards text settings and columns of texts that bled off the page or aligned or overlapped each other.

Print design by David Carson

And yet during all of his adventures we can see that Carson still abides by the principles of design such as establishing focal point, eye flow, hierarchy and negative space.

The Graphic Language of Neville Brody, spread.

Artistic characteristics

Minimalism is an important style of postmodern design, emphasizing simplicity, purity and simplicity. In minimalist design, colors, shapes, lines and materials are carefully selected and combined, and minimalist design is often used in interior design, graphic design and other fields. Eclecticism is another style of postmodern design that emphasizes fusion and mixing. In eclectic design, designers use different design elements and styles to create unique designs.
