Prehistoric Art and Semiotics

In class, the teacher conveyed the meaning of painting and murals to us, and we also learned about the connotation of symbols. It's like being in that period and getting to know each other face to face with symbols.

Through learning, we understand that visual communication began before the intellectual invention of world civilization. We are also deeply aware of the interplay between art and human civilization.

Teacher Anna showed us an artwork of two things. We will explain what we see in them.

The first image:

The yellow background, like the land and rice fields, the central figure easily spread his limbs, the strong muscle lines are very conspicuous, and the performance is very pleasant and easy, like dancing orhunting successfully. This image shows the dynamic of people in activities and expresses a feeling of enthusiasm and enthusiasm. The second image:

The brownish-red background color of the image shows multiple palms, like people waving hopefully, like people calling for help when they are trapped,Let me have a very contradictory feeling, relaxed and depressed, even the warm red, but also let me think of the fire, countless large and small different colors of handprints, want to break through the fire, break through the shackles.

Both images express freedom, but the first is true freedom, and the second is a repressed desire for freedom.

Although we do not know whether our understanding is correct, we can feel the unique charm of art and visual communication through images. I hope we can learn more about art and visual communication in the future.

In general, colors affect mood and emotion. A word can be defined in many ways. The meaning of an image can also be defined differently.

Paul Ricoeur And The Nazca Lines

Today we learned about visual communication and prehistoric art in Teacher Anna's class. In class, the teacher took us to appreciate the Nazca lines. We were shocked and great at these works and felt a strong impact. Through learning, we learn that visual communication has been displayed in the world civilization for a long time, and it is spectacular and beautiful.
We are also deeply aware of the relationship between art and human civilization.
Anna showed us an artwork of two things. We will explain what we see in them.
The first image: Mysterious extraterrestrial signals - the Nazca Lines exist in the Nazca Wilderness of southern Peru and were firstdiscovered in 1939 by a scientist named Paul Kossock. Suffocating mystery and wonder, we can see the straight lines of the square extended into a sharp shape, next to the irregular curve, in the endless Gobi desert, why there are so many criss-cross rays, a ray from the mountain straight into the sky. It's not just a visual impact, it's an impact on thinking and cognition. These indecipherable traces in the Gobi desert of Nazca give us infinite thought and exploration. I felt a different world.
The second image: the image represented by the lines is the appearance of a spider, and there are many other lines blend, it is difficult to imagine such a scene in the vast wasteland, this landscape makes me feel shocked, but also makes me curious, will let people do not think about various possibilities, is this really the masterpiece of aliens?Both images are strange images of lines running across a vast wasteland. The first looks like a tall tower standing between clouds and mist. The second is an image of a spider. Although we do not know whether our guess is correct, through the image, we can feel the visual impact of the image, and the shock that people feel when they see the image. Hopefully, we can create stunning images in the visual effects study in the future.

The Nazca Lines

South America Ancient Cultures

In class, the teacher took us to appreciate the Olmec civilization and the Mayan civilization. We were shocked and great by these works and felt a strong impact. Through learning, we learn that visual communication has been displayed in the world civilization for a long time, and it is spectacular and beautiful. We are also deeply aware of the relationship between art and human civilization

The mutual influence of...

We will choose works of art from two civilizations. Here's what we see in them.

The first image: shows us the Olmec civilization, one of the oldest known civilizations in Central America, which flourished in the area that is now Mexico from about 1200 to 400 BC.

A remarkable archaeological find associated with the Olmec civilization is a series of huge stone statues.

These monumental sculptures, carved from basalt, depict human heads and are considered masterpieces of Olmec art.

There are 17 known Olmec giant heads, each believed to represent a specific individual, possibly a revered leader or ruler.

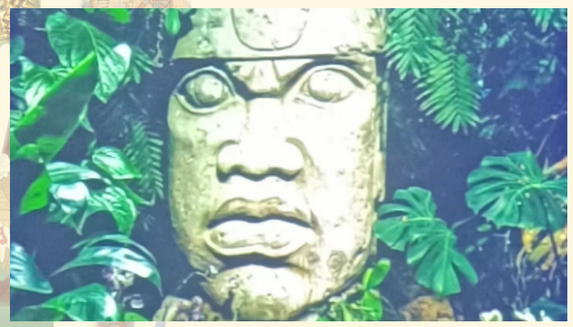

The giant heads were found at Olmec sites in southern Mexico, including La Venta, Tres Zaportes and SAN Lorenzo.

Unearthed during excavations conducted by archaeologists in the 20th century, the sculptures display distinctive facial features, including broad noses, full lips and elongated earlobes, which are considered masterpieces of Olmec art.The second picture shows us the unique charm of Maya civilization, which is one of the three ancient civilizations in Latin America and is also recognized as the most mysterious civilization in the world. Their rise, glory and final decline are all mysteries to modern people. Among the research findings published so far, You can see that Maya civilization was no less advanced than today's technology. Jungle civilization in what is now southeast Mexico, Guatemala, and Belize. The Mayan civilization, along with the Inca Empire and the Aztec Empire, was one of the three major civilizations in the Americas. It can also be said that it is the ancient Indian civilization of Latin America and the outstanding representative of the ancient Indian civilization of the Americas, named after the Indian Maya.

These two images allow us to learn that the Olmec were skilled in agriculture, trade, and art, and that their cultural and artistic influence had a major impact on latercivilizations in the region, suchnever had a unified and powerful empire like the Chinese, the Directory, and other civilizations. The Mayan region was divided into hundreds of city-states, but the Maya states traditionally belonged to the same cultural circle in terms of language, script, religious beliefs, and customs.

Caral Supe Civilization,3000-2500 BC

Maya Civilization, 500 BC-800 AD

Writing System In The World

1.What do all the writing systems in the word have in common?

All the writing systems in the world developed from hieroglyphs. The writing system is the meaning of the word, the sound of two characters of the word. Moreover, in the early days of these characters, the mean-sound characters were not perfect, and due to the extensive use of the false method, the same form represented several homophone language symbols with different meanings. And it had a profound influence on the later writing system.

2.And in your opinion why is it this way?

Pictographic characters come from pictographic characters and are the most primitive way of making characters. The pictographic character is weakened and the symbolic character is strengthened. Egyptian hieroglyphics, Sumerian, ancient Indian, and Chinese oracle bones and stone inscriptions were independently produced from the simplest pictures and patterns of primitive society. With the passage of time, people found the deficiencies of hieroglyphics, the image was too simple, the meaning of the expression was repeated, and began to transform hieroglyphics into ideograms, which matched a symbol with a concept. Ideograms evolved and innovated continuously, changing into letters.

Today, I learned about the evolution of writing in Teacher Anna's class. In class, the teacher took us to appreciate the fonts of different periods, we were shocked and great by these works, and felt a strong impact.

We will choose works of art from two civilizations. Here's what we see in them.

The first picture of the Greek alphabet is from the 11th century BC, when the Phoenicians created the first alphabet-Phoenician alphabet in human history. The clever Greeks created the Greek alphabet by borrowing and modifying the Phoenician script. The Greek alphabet has a profound influence on Greek civilization and even Western culture, and the most common Latin alphabet in the world today and the Cyrillic alphabet used in Eastern Europe are derived from the Greek alphabet.

Greek alphabet

Roman alphabet

The second image, the Roman alphabet, is a widely used Umo writing system. Beginning with the Northern Semitic alphabet, which was used in the Levant around 1100 BC, Phoenician, Etruscan, and Greek developments eventually Europe and became the standard cript for English and the languages of most of Europe and areas settled by Europeans.

The Roman letters have serifs and are highly decorative, giving a sense of luxury and romance. And the font is neatly arranged, full shape, very beautiful.

The Illuminated Books

From what we learn in class, we know that the invention of manuscripts had a great impact on the changes in Europe during the Middle Ages.

The invention of this book is also very important for the following reasons:

The creation of manuscripts accelerated the dissemination of the contents of books.

Writing was reformed to make it easier to read and write,

In its own way, it records all aspects of religious belief and social life during this period. It can not only record religious beliefs, but also be used to convey information and emotions. In the manuscript, the composition, color, texture and other aspects of the picture are obviously decorative, which is a style that is different from other art forms. It is a huge cultural heritage of Europe in the Middle Ages, and is important for the inheritance of traditional European culture.

Medieval Europe was Mired in feudalism, most people were trapped in the shackles of poverty, communication between cities was slow, travel was dangerous, reading and writing were the prerogatives of the elite, the spirit of humanism was revived across the empire, and scholars began to imitate the academic styles of the ancient world. Copies of ancient Greek and Roman literature began to be highly regarded.

Next we will choose two images of the codex to specify our feelings.

The first image:

This manuscript uses delicate and complicated pattern decoration and stroke design, and the overall tone is unified and coordinated, which makes people feel comfortable at first. The geometric border concentrates the text and makes the picture more tidy and orderly. The text is also carefully designed, using serifs to show, the interior of the letters are decorated with color blocks to make it more interesting and vivid, and the background of the font uses a diamond grid to make the details more hierarchical and highly readable.

The Book of Lindisfarne, England.

The second image:

It is a manuscript decorated with clay gold and is one of the early examples of graphic design. This is a manuscript of the Bible Gospel with ornate decorative text, and the beginning of each short article has an illustration, which is a representative of Western calligraphy, and also represents the peak of island art painting. It is also considered to be Ireland's most precious national treasure. The Book of Kells is far more luxurious and complex than other island Gospels, and his design combines traditional Christian mottings with the typical swirling mottings of island art, with humans, animals, mythical beasts, Celtic knots, and brightly colored interlacing to enliven the manuscript's pages. These small decorative elements are full of Christian symbolism and thus can further deepen the theme of the illustrations.

The Book of Kells, Ireland, 800AD

Printing comes to Europe

China has a long history of studying characters since ancient times, carving and writing them on natural materials such as rock walls, leaves, animal bones, stones and bark. Because written materials are expensive, only brief accounts of important events can be made. This seriously affects the development of social culture. The advent of printing facilitated the development of characters, so printing was invented and promoted the development of characters.

Ancient printing is an important invention in the history of human civilization, which provides a more convenient and economical means for the dissemination and exchange of information.

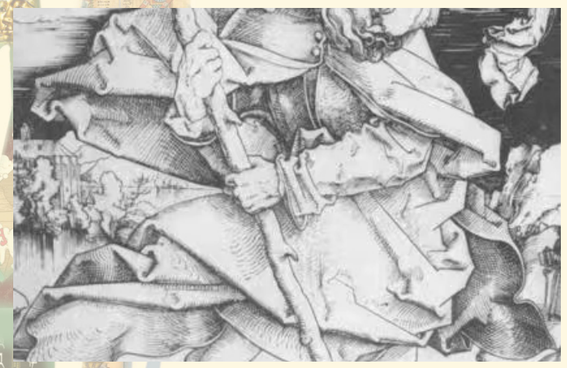

Through learning in class, we know the development of printing and its impact on the world. Here are the two printing processes we selected.

The first image is a first board print. From about 1400, woodcutting made it possible to reproduce a single subject in large numbers. Like Western painting, woodcut prints mainly focused on religious themes in the initial stage of their appearance. One of the oldest works in the first exhibition is from the Bavaria or Salzburg region of Germany, painted around 1420. "Saint Christopher" is a Northern Renaissance style work created by Hans Bardon Grien in 1520, which belongs to the religious painting subject of the Renaissance period, the size of "Saint Christopher", using woodcuts, and is currently in the care of the German National Museum. Renaissance European artists. While working in Durer's workshop, he acquired the name Grien. His altarpieces are famous for their supernatural subject matter and varied colors.

The second image is engraved copperplate printing. An anonymous master Plaujka, a contemporary of Gutenberg, created the earliest known bronze engraving. Engraving is the act of printing an image carved or cut into a printed surface. To make copperplate engravings, drawings are carved on smooth metal plates. Ink is applied to the depression, the surface is wiped clean, and the paper is pressed onto the board to receive the ink image. The quality of his paintings suggests that he was probably an artist, not a goldsmith. I think engraving copperplate printing is a difficult technique, and copperplate printing can be very textured.probably an artist, not a goldsmith. I think engraving copperplate printing is a difficult technique, and copperplate printing can be very textured.

Engraving Copperplate

Woodblock print of Saint Christopher, 1423

The German Illustrated Book

We will introduce two important figures of this period and their works.

The first character:

Gutenberg (1397-1468), born in Mainz, Germany, was a goldsmith, inventor and publisher. His most famous invention was Western movable-type printing, a technique that used movable metal letters arranged into words and inked on paper.

This technology has made the production of books faster, cheaper, and more diverse, thus promoting the development of culture, education, religion, and science. Gutenberg is known as the "father of Western civilization" and his invention is considered one of the most important events in modern history.

The second person:

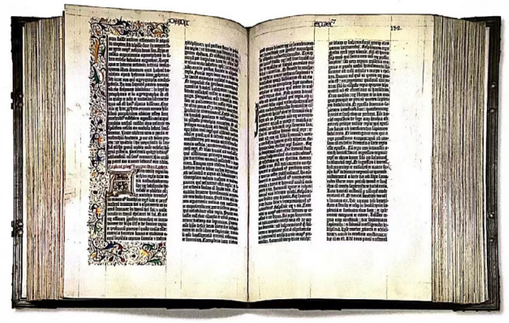

Albrecht Durer (1471-1528), born in Nuremberg, was a German painter, printmaker and woodblock designer.

Durer's works include woodcut prints, oil paintings, drawings and so on. Printmaking is the most influential of his works. The atmosphere and emotion of his works are extremely vivid.

Germany was then in the midst of a struggle between the bourgeoisie and the artisans, and the passions of the people had at last developed into numerous mass movements. Durer wanted to place apocalyptic fantasies in the images of reality and give them allegorical power. In his paintings, he openly criticized the ruling forces, and he submitted his opinions to the conscience of everyone.

First image:

The Gutenberg Bible was the first movable type printed in Latin font, marking a turning point in printing history, and its printing quality was very high, the font was beautiful, the layout was clean, the paper was thick, and the binding was beautiful. It also comes with hand-painted color illustrations and decorative borders, adding a sense of art and personalization. The Gutenberg Bible has been hailed as "the masterpiece of the world's printing history", and its influence on later generations is difficult to estimate. Prior to this, Chinese and Korean movable type printing technology did not survive because it was not widely spread. Johannes Gutenberg spent 20 years perfecting his invention and finally finished the Bible, which has 42 lines per page. There are two volumes, totaling 1,282 pages, each with 42 lines of text. It uses about 200,000 types, with 290 different letters and symbols.

The Gutenberg Bible

The Praying Hand

The second image:

More than 450 years later, hundreds of Albrecht Durer's masterpieces have survived. His sketches, drawings, watercolors, woodcuts, and copper engravings can be found in museums around the world. However, most people are most familiar with this work.

Renaissance In Graphic Design

In this lesson, we learned the history of Renaissance figures, their works and trademarks.
Artists like Leonardo da Vinci made him in the context of the Renaissance. Renaissance refers to a European ideological and cultural movement that took place from the 14th century to the 16th century and reflected the requirements of the emerging bourgeoisie. The concept of "Renaissance" was used by Italian humanist writers and scholars in the 14th and 16th centuries. At that time, people thought that literature and art had been highly prosperous in the classical times of Greece and Rome, but declined and disappeared in the "dark ages" of the Middle Ages, and it was not until the 14th century that it was "regenerated" and "revived", so it was called "Renaissance". Leonardo da Vinci was born in a small town in Florence. In his early years, he studied painting in the workshop of Rocchio, a famous painter and sculptor at that time. He was trained in painting, sculpture, mechanical production and other aspects, and showed shine on you's artistic talent very early. Leonardo da Vinci, Michelangelo and Raphael were all born in bourgeois families and were deeply influenced by new ideas of artistic thinking. These experiences doomed them to stand in the ranks of anti-religion and anti-feudalism, and liberated people's spiritual thoughts from the shackles of feudal theology, which was their common artistic goal.
The first picture
Madonna of Bruges is

Michelangelo's early work. Although Michelangelo was only 31 years old at this time, he was already recognized as one of the most outstanding masters at that time.On the contrary, in the 16th century, when the theme of "The Virgin Son" was expressed, the little Christ was often treated as a beautiful and happy little rascal, while the Virgin was a well-dressed, happy and comfortable housewife. But Michelangelo thought that God should be different from mortals, and here he adopted a brand-new technique. Although little Christ is also playing, he is very serious and seems ready to leave his mother and accept his fate at any time. The Madonna is melancholy. As a mother, she seems to have a premonition of the future fate of Christ, and the whole statue is shrouded in a solemn atmosphere.
The second picture
Leonardo, was an Italian Renaissance polymath whose areas of interest included invention, painting, sculpting, architecture,

Madonna of Bruges

Leonardo Da Vinci

anatomy. He has been variously called the father of ichnology, and architecture, and is widely considered one of the greatest painters of all time. Sometimes credited with the inventions of the parachute, helicopter and the tank.

An Epoch of Typograghical Genius

How did the Enlightenment influence France and the printing press?

Impact on France:

The core ideas of the Enlightenment had a profound impact on the French Revolution. The ideas and theories of Enlightenment thinkers provided people with the ideological tools to resist injustice and despotism. Their critique of inequality and injustice inspired people's social consciousness and called for a more just, equal and democratic social order.

The emergence of the Enlightenment came from scientists who began to conduct in-depth research on nature through positivism and rational thinking. They proposed new scientific ideas and theories that upended traditional religious ideas, and this scientific way of thinking stimulated curiosity and inquiry in people, prompting them to think independently about social, political, and moral issues.

Influence on typography:

Business and trade flourished in Europe in the 18th century, contributing to urbanization and the rise of the middle class. The middle class aspired to more political and social power, free from the privileges of the feudal aristocracy and the church.

At this time, the invention of printing made the publication and dissemination of books more extensive and convenient. The works of Enlightenment thinkers quickly spread across Europe through the printing press,

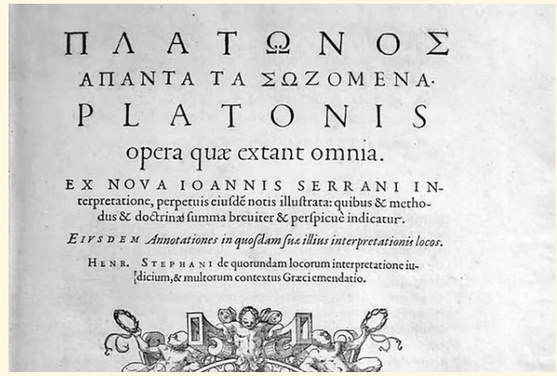

reaching a larger audience.

The first image:

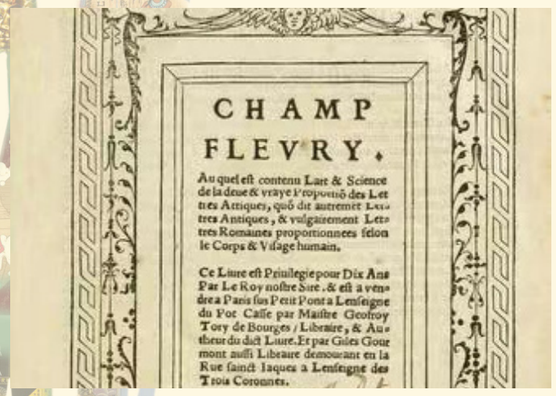

The book was edited by Esteiner, one of the first French printers, designers and publishers dedicated to the field of printing and design. He himself was a Greek scholar who, through his design and organization, translated and published a variety of scholarly works in Latin, Hebrew, Greek, and other languages. He was also enthusiastic about the publication of so-called "big books", especially reference books including dictionaries and dictionaries. The publication of these works made him one of the most important graphic designers and publishers of the French Renaissance.

he second image:

The book was written by Geoffroy Tory Geoffroy Tory and the typeface designer Claude Garamond (1490-1561), who created a highly elegant and luxurious style in book design, are very prominent representatives in early France and influenced the book design, layout.

Paradise, 1529

(Heaven) is a widely popular work on the French language, which describes both the creation of elegant proportions of the French alphabet and the accurate use of French grammar,illustration style in later France, with great significance.

Graphic Design in the 19th Century

Printing became popular as early as 3,000 BC in the Mesopotamia, when the people of the Mesopotamia used roller seals to make printed products, and its main role was decoration and witchcraft. In graphic design in the 19th century, this traditional technique was not immediately eliminated , but was further developed and widely used. Since 1910, advertising has continued to develop, from classical to modern, cumbersome to simple, until now, the development of advertising is getting better and better, and more and more fashion attracts people.

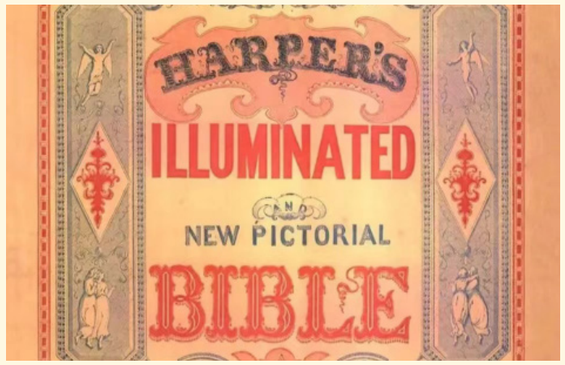

The Art and Craft movement is an artistic trend and creation method that arose in the early 20th century, aiming to integrate art with daily life, emphasizing the combination of practicality and aesthetics. The movement advocates the application of art to the design and production of real goods, and pursues the integration of art and craft to improve the beauty and quality of daily life.

In general, the Arts and Crafts movement emphasized practicality, aesthetics and hand-making, aimed at improving the quality of everyday life and promoting the integration of art and life, and played an important role in the development of modern design and lifestyle.

The first picture:

The Victorian style was deeply influenced by their nostalgia for objects from the past. The Victorian design style almost always filled the entire page with images and type. Symmetry was also used heavily in

in layout and design. This work uses the combination of red and blue to express the beauty of holiness , literature, anatomy, geology, astronomy, history, and cartography. He has been variously called the father of ichnology, and architecture, and is widely considered one of the greatest painters of all time. Sometimes credited, he epitomized the Renaissance humanist ideal, considered the universal Genius.

Harper's illustrated Bible by Joseph Adams.

The second picture:

Top designer: Jules Chemret

Jules Chasarette (31 May 1836-23 September 1932) was a French painter and lithographer. He has been called the father of the modern poster.

He was trained in lithography in London, England. Upon his return to France, he produced vivid poster advertisements for cabaret, concert halls and theaters (e.g., Eldorado, Olympiad, Moulin Rouge), municipal festivals, as well as drinks and spirits, perfumes, soaps, cosmetics and medicines.

Jules Chéret（31 May 1836 - 23 September 1932)

His large posters show moderately free-spirited women.

The female image in his works is elegant and beautiful, lively posture, and noble dress, which not only became a artistic image, but also became the object by young French women.
